

LILIPHONE

VOICE CONTROLLED MOBILE PHONE

OVERVIEW

Liliphone is a very easy to use mobile phone, with only the basic functions. It is intended for visually impaired people, people with physical disabilities unable to use a phone with keys, and elderly people.

All the available functions are controlled by voice commands. In order to perform an action, simply touch the display with a finger and say what you want to do: Lili will help you by answering with her voice. To touch the display, you could also use a movement of the head, elbow, feet or a bluetooth switch.

Lili will help you to do the following things: make and answer a call, send or receive an sms, and add contacts to the phone book.

And if you need more functions, you can quit Lili and enter in a standard Android operating mode. Also note that Lili doesn't need an internet connection to work.

AVAILABLE FUNCTIONS

With Liliphone you can:

call a phone number or a contact, answer a call, hang up, know who is calling, type in a number when requested during a call, list missed calls and call back

Send and receive an sms, delete an sms, consult message inbox

Add a contact to the phone book, delete a contact, read all the contacts

Ask for the date, time and battery level, read the user guide, activate the speakerphone

Go to the standard functions of an android phone.
